

Business Insights 360

Business Requirements Document (BRD)

AtliQ Hardware — Analytics Transformation Initiative

Document Type	Business Requirements Document (BRD)
Project Name	Business Insights 360
Organization	AtliQ Hardware
Domain	Manufacturing & Hardware Distribution

1. Purpose

This document captures the business requirements for the Business Insights 360 project at AtliQ Hardware. It defines what the business needs from this initiative — not how those needs will be implemented technically. The BRD is intended to align stakeholders on scope, priorities, and expected outcomes before development begins, and to serve as a reference point throughout the project lifecycle.

The primary audience is the project sponsor, department heads, and the analytics team. It is not a technical specification.

2. Project Background

AtliQ Hardware manufactures and sells computer hardware globally across retail, distributor, and direct channels. As the business expanded internationally, its Excel-based reporting model became a liability — reports were delayed, metrics were inconsistently defined, and leadership had no consolidated view of performance.

A failed market entry in Latin America, where strategic decisions were made without reliable data, accelerated the case for change. Top management approved a move to Power BI as the primary analytics platform. The project also includes a SQL reporting layer — stored procedures and structured queries — for product owners who need on-demand, filtered access to key reports without building dashboards.

3. Business Objectives

- Replace manual Excel reporting with an automated, always-current BI environment accessible to all relevant departments.
- Establish a single governed data model where key metrics — Net Sales, Gross Margin, Net Profit, Forecast Accuracy — share one consistent definition across the business.
- Give each department a purpose-built view of its KPIs, with drill-down capability by market, product, customer, and time period.
- Give supply chain teams forward-looking risk indicators rather than retrospective summaries.

4. Stakeholders

Stakeholder	Role	Involvement	Key Requirement
Top Management / CEO	Executive Sponsor	Approver, UAT	Unified executive view; market share and revenue trends
Finance Team	Primary User	Requirements, UAT	Real-time P&L from Gross Sales to Net Profit vs target
Sales Team	Primary User	Requirements, UAT	Customer and product performance; discount and margin visibility
Marketing Team	Primary User	Requirements, UAT	Opex impact on Net Profit; segment and category matrix
Supply Chain Team	Primary User	Requirements, UAT	Forecast Accuracy %, risk flags, Net Error trend
Product Owners	Report Consumer	Feedback	On-demand SQL reports via stored procedures with filters
Analytics / BI Team	Project Owner	Builder, deployer	Clean data model, quality, gateway setup

5. Scope

In Scope	Out of Scope
Five-page Power BI dashboard (Finance, Sales, Marketing, Supply Chain, Executive)	Predictive or machine learning models
SQL queries and stored procedures for key business reports	Real-time streaming or event-driven data
ETL pipeline via Power Query from MySQL and Excel	CRM or ERP system integration beyond provided data
Snowflake schema data model and DAX measures in Power BI	Mobile-optimised dashboard layout
Published to Power BI Service with gateway auto-refresh	Automated email alerts or report subscriptions
UAT and stakeholder feedback incorporation	Financial forecasting or planning modules
Data validation against benchmark values	Data entry or write-back functionality

6. Business Requirements

Requirements were gathered from stakeholder discussions and validated during UAT. Priority: High = must-have, Medium = important, Low = nice-to-have.

6.1 Finance

Sr. No.	Category	Business Requirement	Priority
1.	P&L Reporting	Display a Profit & Loss statement from Gross Sales to Net Profit, broken down by P&L line items.	High
2.	Benchmark Comparison	Allow users to toggle between Last Year and Target as the benchmark for all Finance metrics.	High
3.	KPI Cards	Show Net Sales, Gross Margin %, and Net Profit % as prominent KPI cards.	High
4.	Net Sales Trend	Show a time-series trend of Net Sales compared to the selected benchmark.	High
5.	Top / Bottom Analysis	Enable identification of top and bottom products and customers by Net Sales.	Medium

6.2 Sales

Sr. No.	Category	Business Requirement	Priority
1.	Discount Breakdown	Show Pre-Invoice and Post-Invoice Discount amounts to explain the gap between Gross Sales and Net Sales.	High
2.	Margin Breakdown	Display COGS and resulting Gross Margin to show what remains after cost of goods.	High
3.	Customer Performance	Show Net Sales, Gross Margin, and Gross Margin % at individual customer level.	High
4.	Product Performance	Same metrics as BR-S03 available at individual product level.	High
5.	Performance Matrix	Provide a matrix to compare markets, customers, and regions by Net Sales and Gross Margin %.	Medium
6.	Sales Trend Tooltip	On hovering over a customer, show a trend of that customer's Net Sales and Gross Margin % over time.	Low

6.3 Marketing

Sr. No.	Category	Business Requirement	Priority
1.	Net Profit View	Show Net Profit after subtracting operational expenses from Gross Margin.	High
2.	Toggle — Metric Axis	Provide a toggle to switch the performance matrix between Net Profit % and Gross Margin % as the performance axis.	High
3.	Segment Breakdown	Allow performance analysis at Segment, Category, and Product levels.	Medium

6.4 Supply Chain

Sr. No.	Category	Business Requirement	Priority
1.	Forecast Accuracy KPIs	Display Forecast Accuracy %, Net Error, and ABS Error as KPI cards.	High
2.	Risk Classification	Flag each product and customer as at risk of overstock or out-of-stock.	High
3.	Accuracy Trend	Show a trend of Forecast Accuracy % vs Net Error over time.	High
4.	Customer & Product Detail	Show FA%, FA% vs Last Year, Net Error, Net Error %, and Risk Factor at customer and product level.	Medium

6.5 Executive

Req ID	Category	Business Requirement	Priority
1.	Market Share Trend	Show AtliQ's market share trend over time alongside key competitors.	High
2.	Revenue by Division & Channel	Break revenue by Division (PC, P&A, N&S) and Channel (Retail, Direct, Distributor).	High
3.	Top 5 Products & Customers	Display the five highest-revenue products and customers prominently.	High
4.	Sub-Zone Contribution	Show revenue contribution % by geographic sub-zone.	Medium

6.6 SQL & Data Layer

Req ID	Category	Business Requirement	Priority
1.	Stored Procedures	Create stored procedures for complex queries so product owners can filter reports by market, period, or segment without writing SQL.	High
2.	P&L Report	Produce a SQL-based P&L report from Gross Sales through to Net Profit.	High
3.	Forecast Accuracy Report	Calculate Forecast Accuracy % and Net Error by customer and product via SQL.	High
4.	Data Validation	Validate all dashboard metrics against benchmark values before go-live.	High

7. Business Rules

The following rules govern metric definitions across all reports and dashboard views. Any deviation from these definitions must be approved before implementation.

Metric	Definition / Business Rule
Net Sales	Gross Sales minus Pre-Invoice Deductions minus Post-Invoice Deductions
Gross Margin	Net Sales minus Cost of Goods Sold (COGS)
Gross Margin %	$(\text{Gross Margin} / \text{Net Sales}) \times 100$
Net Profit	Gross Margin minus Operational Expenses
Net Profit %	$(\text{Net Profit} / \text{Net Sales}) \times 100$
Forecast Accuracy %	$1 \text{ minus } (\text{ABS Net Error} / \text{Total Forecast Quantity}) \times 100$
Net Error	Forecast Quantity minus Actual Sales Quantity
ABS Error	Absolute value of Net Error aggregated across all records in scope
Benchmark (BM)	User-selectable via slicer: Last Year actuals or agreed Target. Applies globally to Finance view comparisons.
Risk — Excess Inventory	Flagged where FA% is high but Net Error is significantly positive (consistent over-forecast)
Risk — Out of Stock	Flagged where FA% is low and Net Error is significantly negative (consistent under-forecast)

8. Assumptions & Constraints

Assumptions

- Source data in MySQL is complete and accurate for the periods covered. Any data gaps are treated as intentional, not missing records.
- Excel files used as supplementary sources (targets, market share data) are maintained by the business and will remain available for gateway refresh.
- The benchmark toggle (Last Year or Target) is a user-controlled slicer. The system does not default to either option.
- All five dashboard views are for internal use only. External sharing or white-labelling is not in scope.
- User access management is handled through Power BI Service roles, not within the dashboard itself.

Constraints

- Only the provided data sources are in scope: MySQL database and local Excel files. No third-party data feeds will be connected.
- All development is within Power BI Desktop, Power Query, and DAX. No custom visuals outside the standard Power BI marketplace are permitted.
- Auto-refresh frequency is subject to the limits of the Power BI Service licence in use.
- Historical data coverage is limited to what exists in the source MySQL database. No backfilling is in scope.

9. Success Criteria

The project is considered complete when all of the following are met:

Success Criterion	Measure	Owner
Dashboard live on Power BI Service	All five views accessible with gateway auto-refresh active	Analytics Team
Data validation passed	All KPIs match benchmark values confirmed at UAT sign-off	Analytics + Finance
Stakeholder sign-off	All five department heads approved their dashboard views	Project Sponsor
SQL layer complete	Stored procedures tested and accessible to product owners	Analytics Team
User adoption confirmed	All primary user groups have accessed their respective views	Department Heads

Performance acceptable	Dashboard loads within acceptable time on Power BI Service	Analytics Team
------------------------	--	----------------

10. Expected Deliverables

- MySQL database with Snowflake schema ERD and fully loaded source data
- SQL queries and stored procedures for P&L reporting, top/bottom analysis, and supply chain forecast accuracy
- Power BI report file (.pbix) with complete data model, DAX measures, and all five dashboard pages
- Published Power BI report on Power BI Service with gateway configured for auto-refresh
- Data validation report confirming KPI accuracy against benchmark values
- UAT sign-off documentation from all primary stakeholder groups
